

2X Stronger Teeth

With Arginine + Monofluorophosphate (MFP)

Eco modulator of oral biofilm and pH homeostasis through ADS pathway ¹

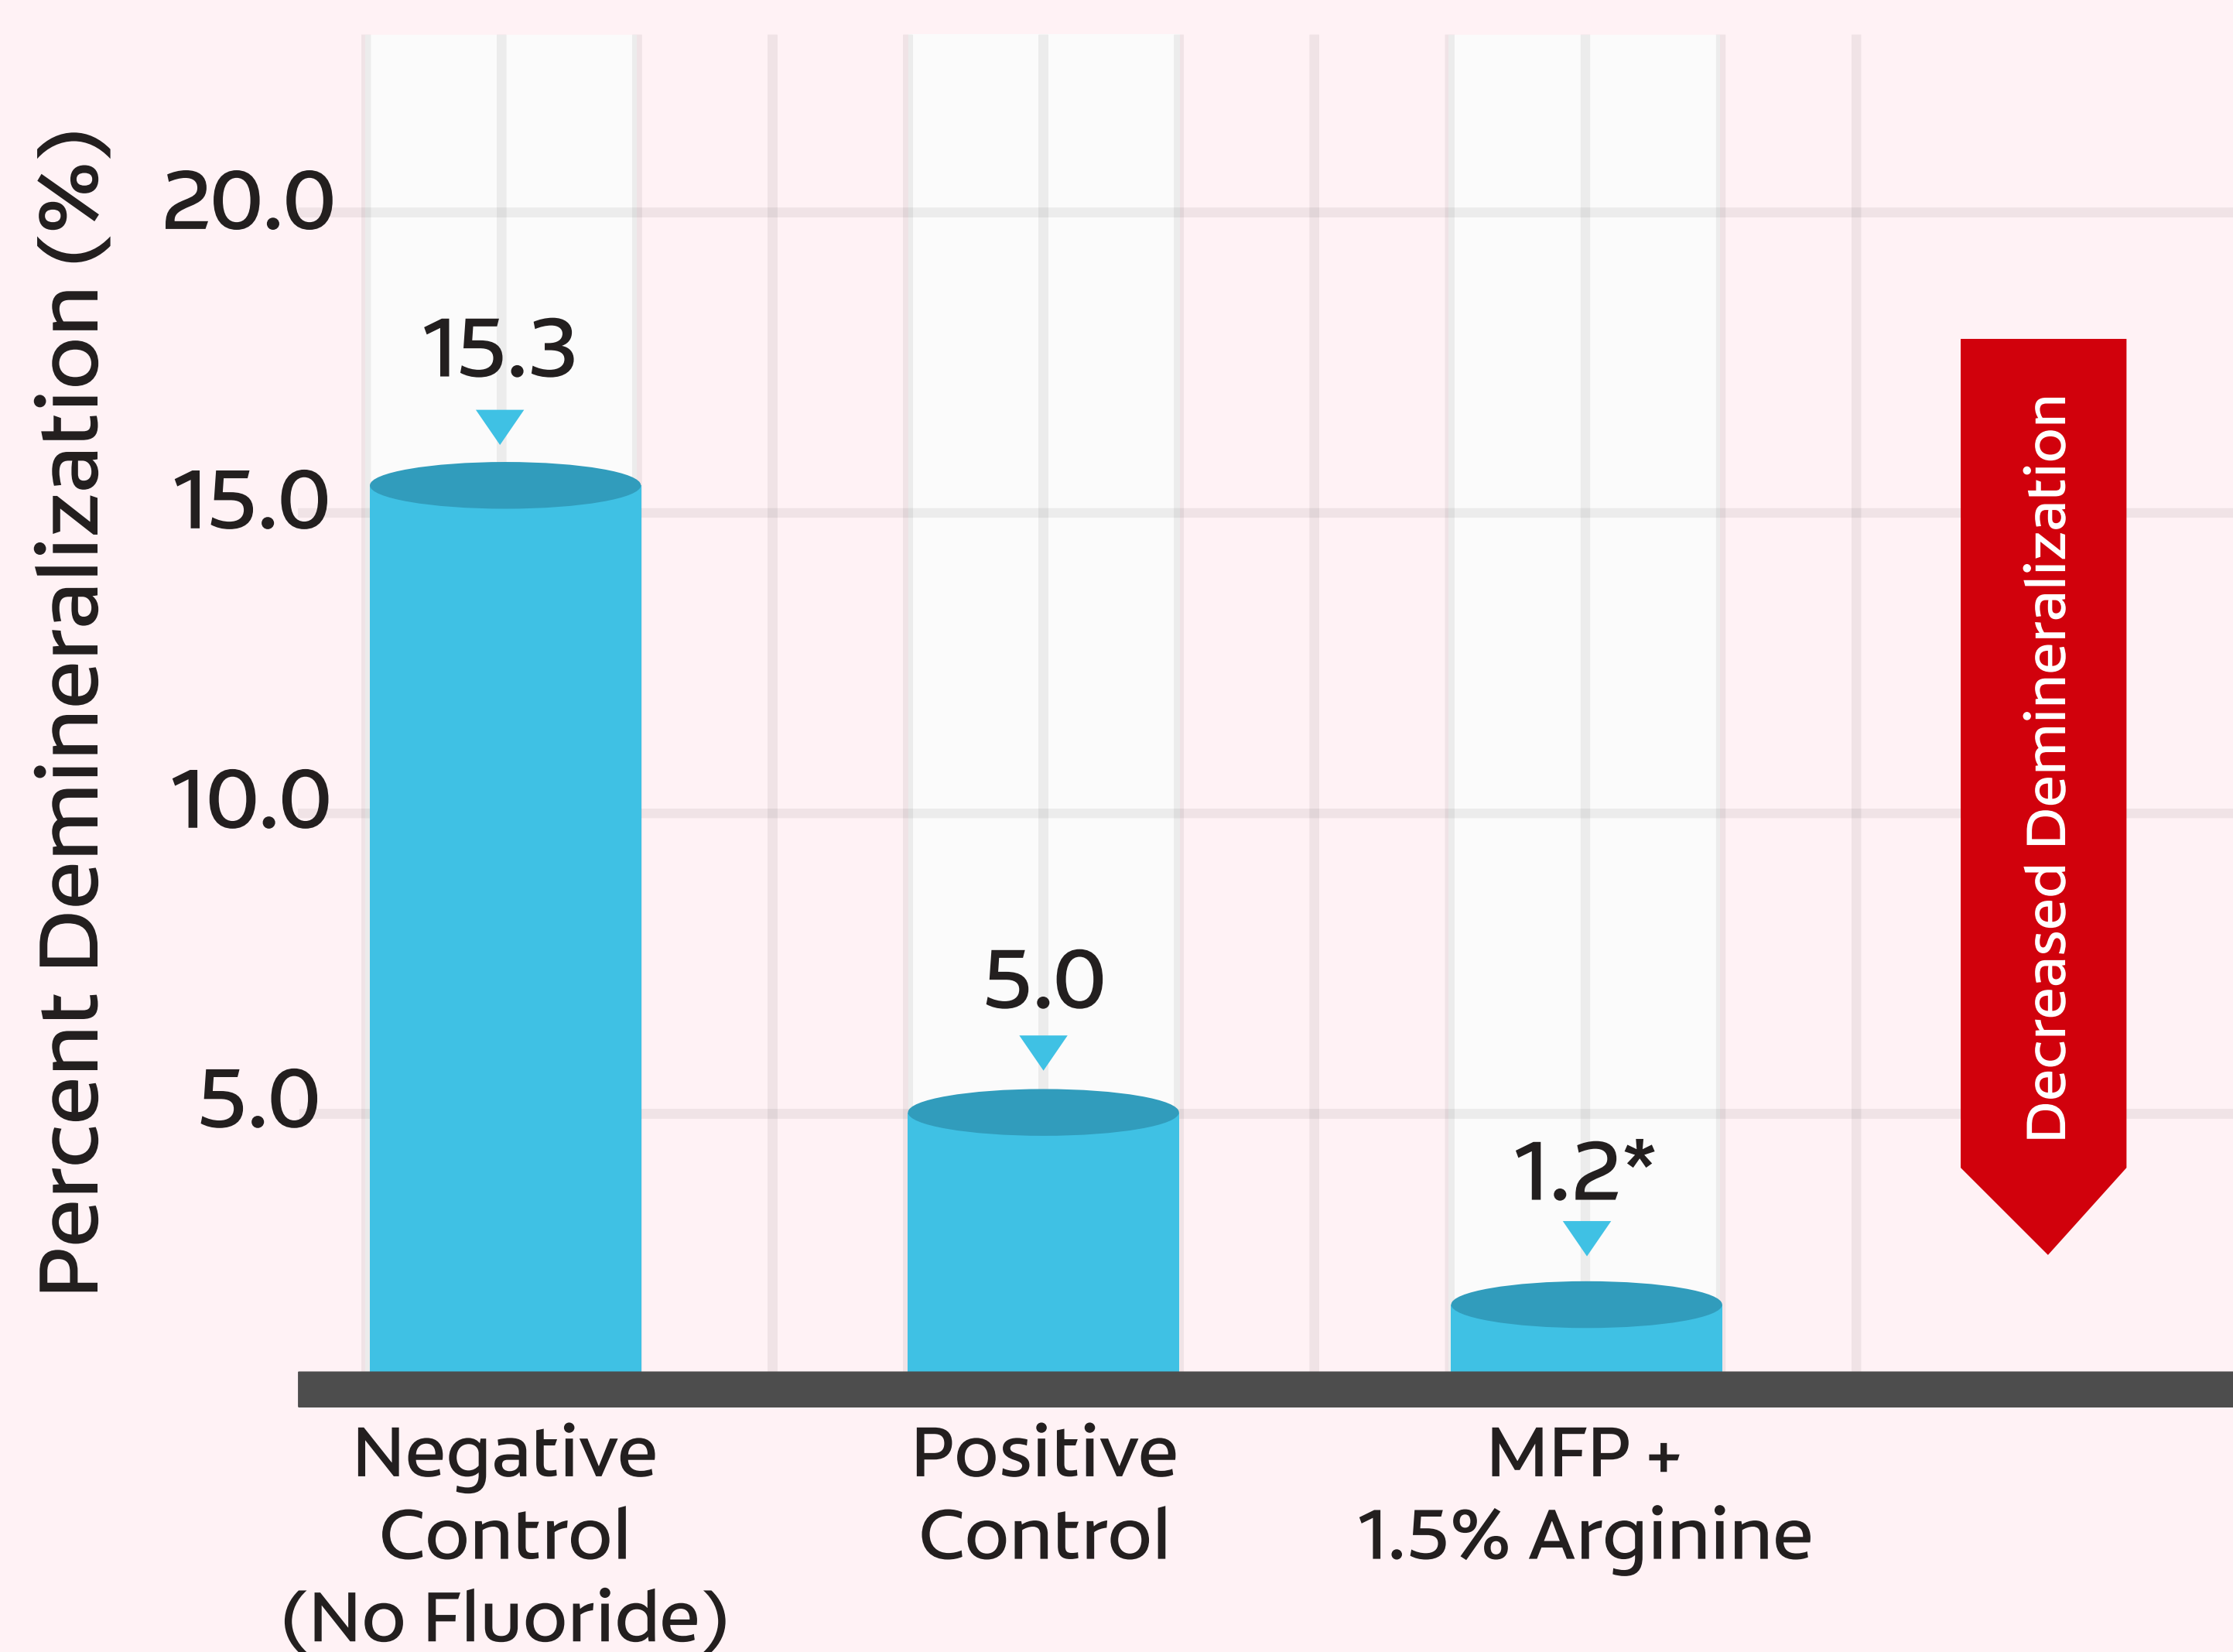

Enhances tooth enamel remineralization

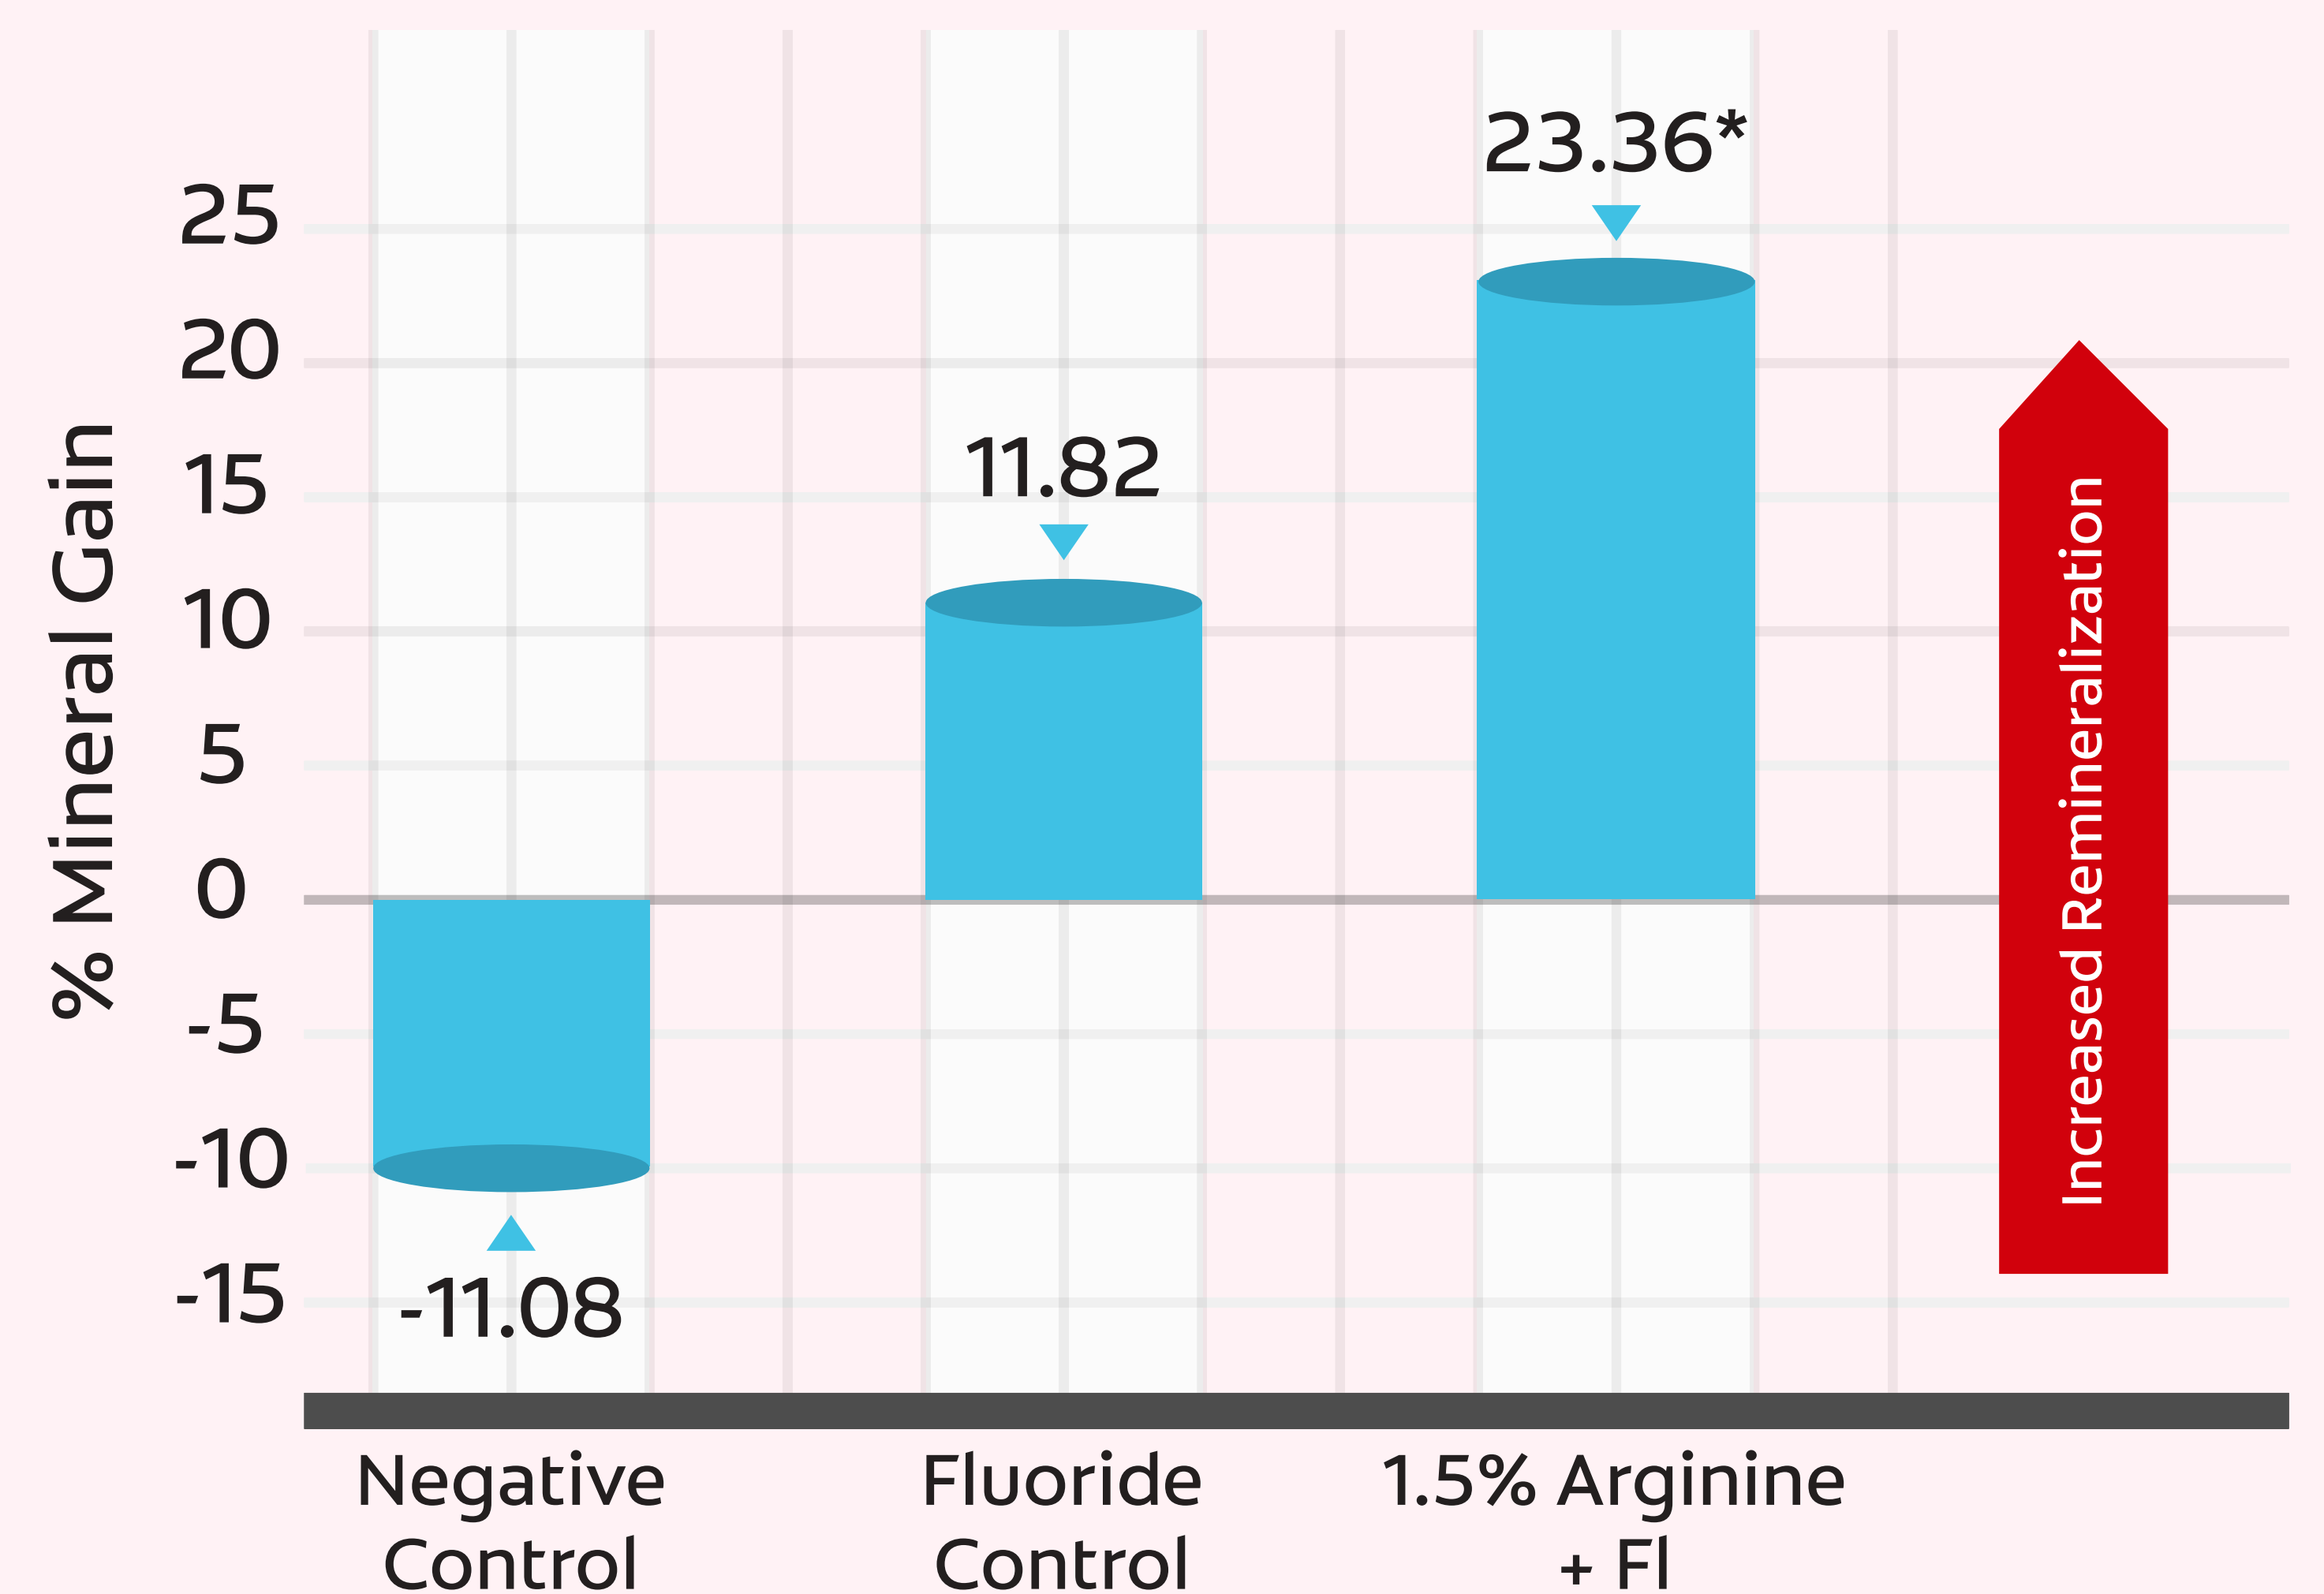

Reduced demineralization through accelerated enamel fluoride uptake

4x better prevention of enamel demineralization ^{#, 2}

*Statistically significant versus negative and positive control.

2x better enamel remineralization ^{#, 3}

*Statistically significant versus Fluoride control and negative control.

Arginine +MFP : Modulation of oral homeostasis leading to superior remineralization & reduced demineralization
